<center>**Usability Testing Script and Results**</center>

Scenario: You are an employed, part-time mother of five rambunctious children. It's a Friday night, which means Family Fast Food night! All of your children want something different and you can't decide on what restaurant to pick.

Task 1: Customise your preferences to include...

1) Italian for cuisine options
2) Fast food for dining options
3) Drive-thru for delivery method

(Note: I have to extend my prototype to do this)

Task 2: Go through with the customisation process, pick Fazoli's, and scroll through the customer reviews.

(Note: I have to extend my prototype to do this.)

Task 3: Share to Facebook, Twitter, and Instagram and rate the restaurant

(Note: I have to extend my prototype to do this)

Note:

What changes should be made to the application (3 things)?

- The ability to access your profile at any time
- The ability to let the user rate the restaurant rather than just being able to see the rating
- Menu access through the app

What about the application is good (3 things)?

- Offers directions through the app
- Customisable payment method (keeps your information)
- Acknowledges dietary restrictions
